PASSWORD	<input type="text" value="DFE3E5B8B7"/>
SSID BROADCAST	<input checked="" type="radio"/> PUBLIC <input type="radio"/> PRIVATE

Advanced Settings

CONFIGURATION VIEW	<input checked="" type="radio"/> MANUAL <input type="radio"/> WI-FI PROTECTED SETUP
NETWORK MODE	<input type="text" value="2.4GHz Wireless"/>
2.4GHz Wireless Network	
NETWORK MODE	<input type="text" value="Mixed"/>
CHANNEL WIDTH	<input type="text" value="20 MHz Only"/>
CHANNEL	<input type="text" value="Auto"/>

Network Name: SSID is your Wi-Fi Broadcast name. You can change it to be "Company Wi-Fi" "Private network". Also, you can use WPA2 Personal as the encryption to your password.

In the '**Advanced Settings**' to get a better Wi-Fi signal connection change the Channel from '**Auto**' to '**Channel 11**'

For the best Wi-Fi channels please select between Channel 1, 6, and 11.

Always Save the configurations by pressing the '**Save button**'.

Once this is complete please perform another speed test using:

<http://speedprobe.skylogicnet.com/HTML5speedtest/>
